SETEC Elevators Announces New High-Tech Residential Elevator Package to Include High Performance Keypad Speakerphones

March 27, 2007 – SETEC Elevators, www.SetecElevators.com, a Texas independent elevator contractor, has established a strategic partnership with K-Tech International, Inc. to provide state-of-the-art technology to home elevator packages.

New High-Tech Phone

This Keypad Speakerphone is the premium emergency communication solution for the home elevator.

It boasts:

- Ease of Use
- Clear Dial Tone
- State-of-the-Art Technology
- Affordable Application
- And Sleek Design

But it doesn't cost more because it does not require a hinged cover box. Now, you can save money over the traditional costly and bulky phone boxes by adding this high-performance keypad speaker phone.

It mounts flush behind a standard brushed stainless steel faceplate, which has been designed to match your car operating panel and other stainless steel elevator fixtures.

The Keypad Speakerphone is easy to operate. Pressing the ON button gives a loud and clear dial tone. The keypad is now active to dial any phone number. When the call is completed it automatically turns off or you can press the OFF button to disconnect the call. For your convenience, there is a volume control button that increases or decreases the volume allowing you to control the sound quality of each call.

Best of all there, is no hinged door or handset to bump into or get in your way. The brushed stainless steel finish is robust and distinctive. This phone is made to compliment all fine cabs and finishes.
